Elderly-Friendliness

What's the present situation of elderly-friendliness in shuangjing?
What do elderly people of shuangjing need?
Can we do something to help them?

Population Aging in Beijing

"When the proportion of population aged over 65 reaches 14%, the region will enter into DEEP AGING period; when it reaches 20%, the region will enter into SUPER AGING period"

2017

Population Aging in Beijing

"Before 2025, Beijing will enter into SUPER AGING period"

- There are more and more families entirely consisting with the elderly.
- Every 2.5 labers raising one senior citizen

The number of elderly people continues increasing.

Citizens live longer and longer nowadays

Potential Life Span

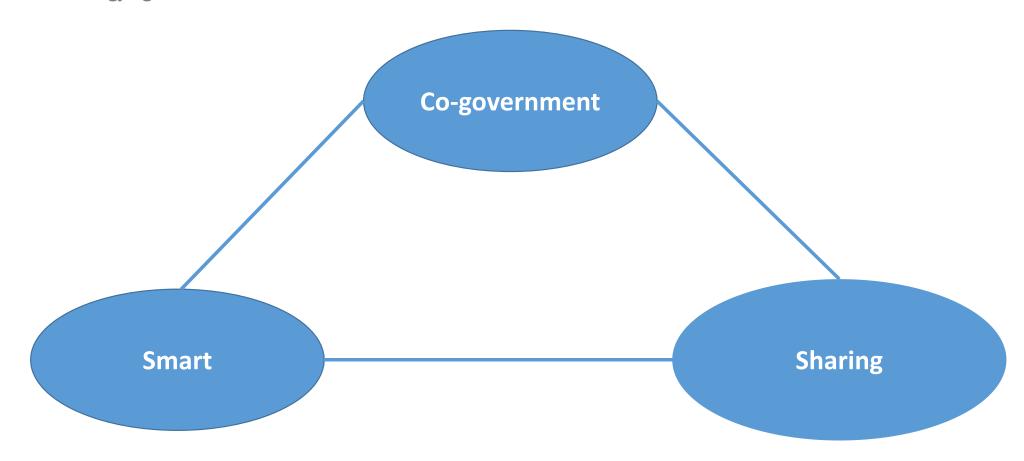

Shuangjing District is an aging community!

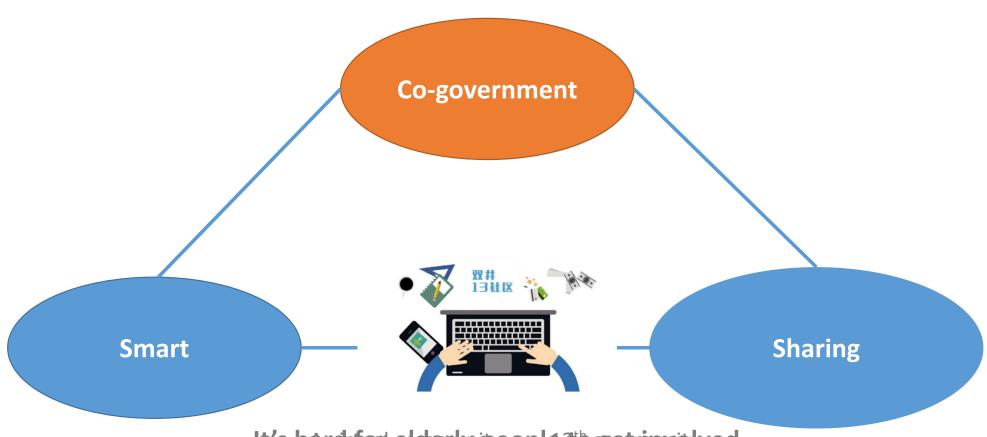

"Shuangjing is more and more ADVANCED!"

The Second Part

The Preparation of Transformation

"What adaption is suitable for Shuangjing?"

Low degree of the friendliness to the elderly in the existing public space

The available space of the built residential area is limited.

There are 12 communities in different situations.

Strong replicability

Micro transformation of public space landscape furniture based on the psychological and physiological characteristics of the elderly

General Course

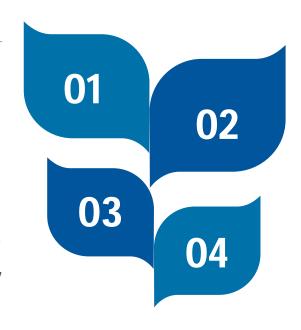

Train of thought of design

Analysis of psychological and physiological characteristics of the elderly

Analyzing the physiological and psychological characteristics of the elderly to understand the different needs of the elderly compared with other age groups

The design of landscape furniture

Combined with the characteristics of Shuangjing street, which are sharing, co-governance and intelligence, and according to the characteristics of the elderly, the transformation design being carried out to solve the existing specific problems

The concrete manifestation of the unfriendliness of the existing public space

Based on in-depth analysis of the current situation of the public space, identifying what is not suitable for the elderly

Replicability analysis

From the aspects of cost and space requirements, analyzing the replicability of the design scheme, and then analyzing the feasibility of the scheme

Physiological and psychological characteristics of elderly people

Blurred Vision Declined Decreased flexibility **Perceptual** function of Decreased ability of color discrimination Brittle bones **Ability** muscle and Less sensitive to sound Vulnerable to tripping and falling bone Decreased ability of thinking Degeneration Sense of Security More of the central Memory loss Sense of Belonging Sensitive and nervous Slow response **Social Contact Emotional** system Mental Disease Be recognized and respected

Activities of elderly people

Culture Activities

Chatting

Walking

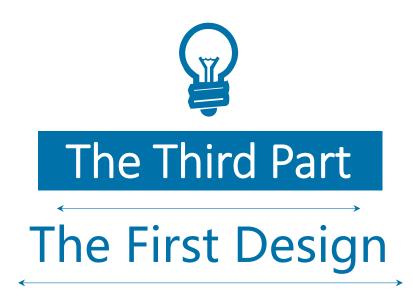

Square Dancing

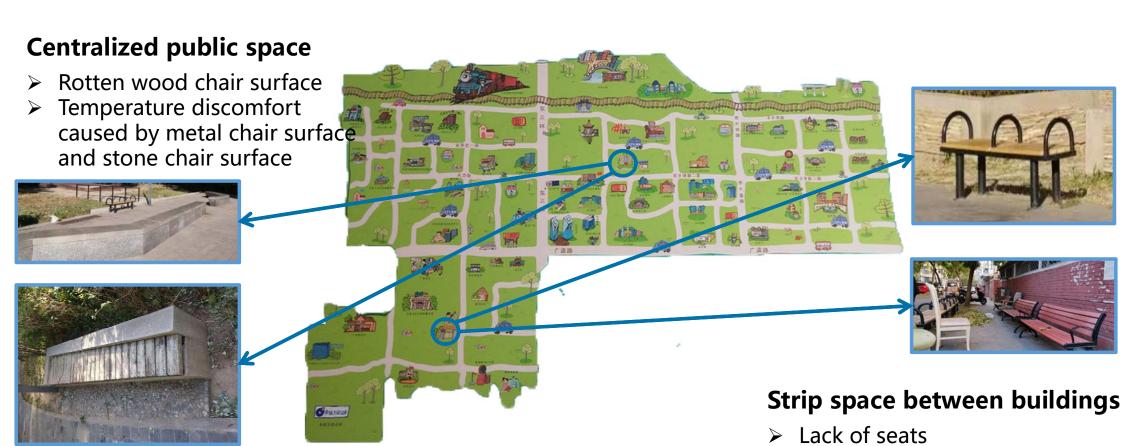

Resting Playing

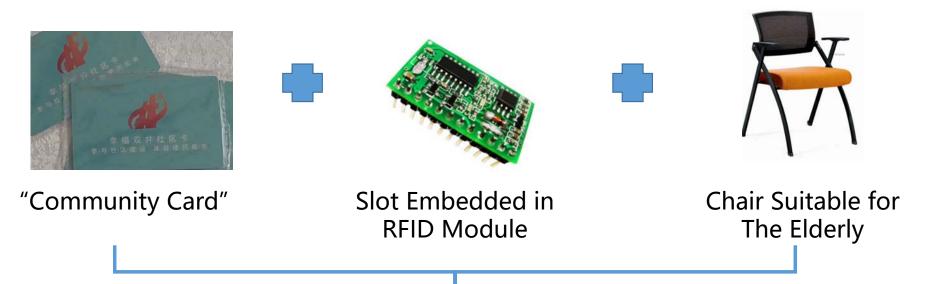

> Handrails limiting capacity

Introduction of the scheme

Under the background of "sharing, co-governance and intelligence" in Shuangjing street, the "sharing seat" scheme is designed. The design of the seat fully considers the physiological and psychological characteristics of the elderly and meets the needs of the elderly to the greatest extent. In addition, in order to facilitate the management, a shared chair slot is designed in combination with the community card.

Flexible shared chair

Design of The Slot

smartphone+nfc chip:

- ☐ The proportion of the elderly using smart phones is not high
- Even with a smartphone, NFC is not always available for the elderly.

community card+RFID module:

- □ Swipe the card to unlock and then take the chair, which is easy to operate
- ■When returning the chair, swipe the card to unlock, return the chair and be recognized by the weight sensor, then complete the returning operation
- When swiping the card, the RFID module will **read the user information** in the community card and record the borrowing and returning, which is convenient for intelligent management and prevents the privatization of the seat

Meet the needs of various elderly groups

Consider elderly people with difficulty in walking

Stress on safety, comfort and convenience

With armrest and backrest, aluminum alloy frame, use waterproof leather and PE vine cushion

Meet all kinds of activities

Enable a flexible disposition

Convenient for management and installation

Prevent privatization, can install easily, suitable for all kinds of community

Body size of the elderly

The standing process of the elderly

Folding chair for elderly

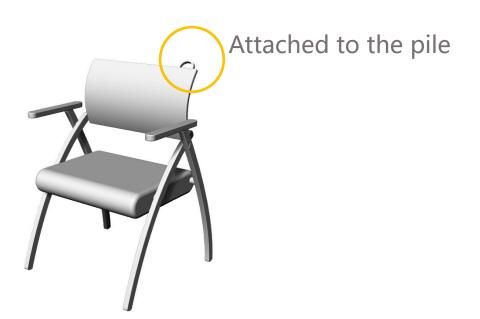

Folding walker with seat

Folding chair for elderly

Folding walker with seat for the elderly

Details of design

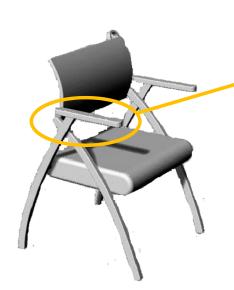

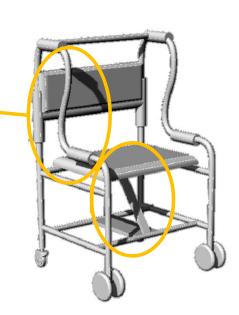

It takes longer for elderly people to stand. They are more likely to lose balance. Leaning forward while standing is helpful.

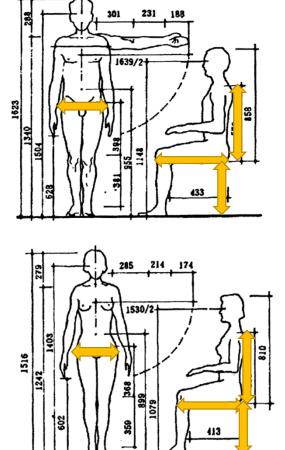

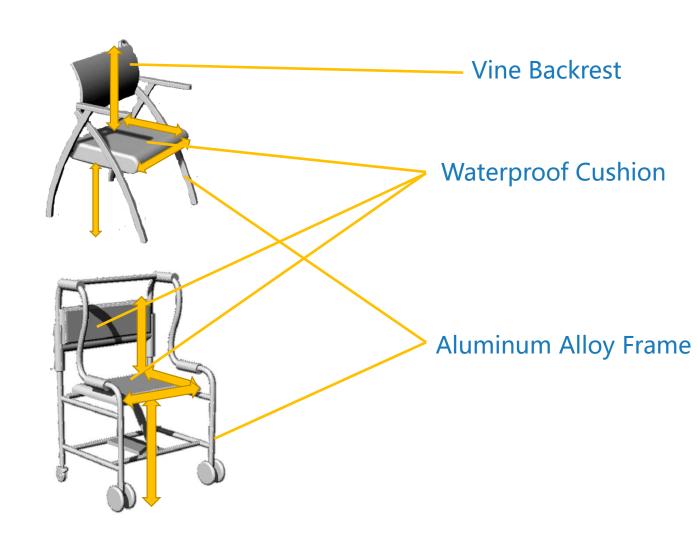

armrest

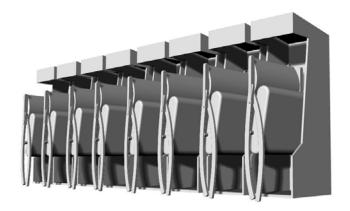

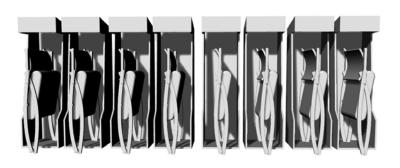

Introduction of the scheme

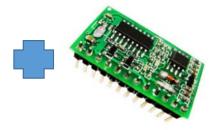

"Shared Chair" Replicability

Low cost

"community card": already universal

RFID module: 15 yuan Steel-galvanized stake: 120 yuan/row

Weight sensor: 30 yuan

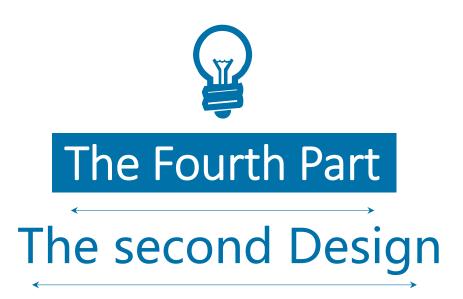

Chair suitable for the elderly : 30 yuan

According to the calculation of 5 slots per row, the average cost of a single seat is about

63 yuan

Requirements for existing space:

The chairs are folded when they are idle, which reduces the space occupied by the public chairs, and requires less space for the renovation.

Status Quo of Exercise Space and Facilities

Narrow exercise space

- parking chaos
- > The square is not fully utilized

Simple and Crude footpath

- > The road without guidance
- Uneven pavement

Design: Calligraphy Floor Tiles

Introduction of the scheme

Design: Calligraphy Floor Tiles

Introduction of the scheme

loyal 70 CM

Filial piety

honest

grace

Traditional Calligraphy uses ink to leave traces on paper Writing on the marble floor with water will leave traces

We carved the outline of the characters on the floor tiles

With the help of the outline, people who can't write can also enjoy the fun of calligraphy

Improvement: Footpath with distance mark

Footpath with distance indication:

- ☐ This simple and small design provides the intuitive goal of the elderly, and the long-distance floor tiles will bring a sense of achievement.
- which remind the pedestrian that this pathway is suitable for walking.

✓ Low cost

Carving on each floor tile ONLY cost 35 yuan

A Chinese brush for floor writing ONLY cost 20 yuan

✓ Micro Transformation

- > Take up only a little space
- > Beautify the square environment

Conclusion

Blurred Vision
Decreased ability of color discrimination
Less sensitive to sound

Perceptual Ability Declined function of muscle and bone

Decreased flexibility Brittle bones

Vulnerable to tripping and falling

Memory loss Slow response Mental Disease of the central nervous system More Sensitive and Emotional Sense of Security Sense of Belonging Social Contact

Be recognized and respected
